Is Your Website Compliant?

Federal judges ruled that state and local government websites must be ADA compliant.

The Americans with Disabilities Act mandates that state and local governments remove access barriers to their web content. Constituents must be able to access government agency web content without barriers due to audio, visual, or navigation abilities.

Incomplete understanding or insufficient management of ADA compliance standards open up agencies to the risk of being in violation.

In **2018** there was a **181% increase** in the number of website-related ADA cases from 2017.

It is difficult to establish a credible case in litigation and settlements can be expensive.

Websites with non-compliant components are vulnerable to discrimination claims, even if the owner is in the process of updating. This means that proactive remediation is essential. Ongoing effective web content accessibility management is necessary for continued compliance.

Costs to remediate websites are manageable, but organizations threatened with lawsuits must also make costly payments for damages and attorney fees to settle outside of court.

FOR ADA ACCESSIBILITY, ISF OFFERS:

- Assessment to Identify Accessibility Issues
- Training
- Remediation
- Cultural Assessments
- Ongoing Monitoring and Support

ADA Compliance aims to improve the functionality and usability of web pages, creating a better user experience for everyone.

ISF employs a holistic approach to Web Content Accessibility Management. This plan includes a proven strategy to Assess, Remediate, and Maintain ADA compliance. ISF is uniquely equipped with skills, experience, and decades of working with government agencies to assist with remediation efforts for web content accessibility.
